Select Medical History Form

Click the “Begin survey” button next to the text label “Medical History.”
Medical History

Confirm that patient information is correct.

Correct Misinformation

If anything listed here is incorrect, launch your dashboard by selecting “Survey Queue” in the top right corner of the window.

The dashboard will show as an overlay. This allows you to access your unique patient dashboard without leaving your form or losing progress.

If you choose to “Edit response” (shown) or begin an additional survey from this dashboard overlay, it will open in a separate tab to avoid losing progress on the current form.
## Medical History

You may return to update this information as necessary through the unique patient dashboard. Additional pop-ups may display based on your choices to request additional information. For example, selecting history of lung disease or cardiovascular conditions will prompt you for more details.
Specify ICU, vent, and supplemental oxygen status prior to infusion. If you select yes for these fields, you will be prompted to specify a date.
Specify if convalescent plasma was administered from a source outside of the EAP. If you select “Yes,” you will be prompted to specify the date and amount of convalescent plasma administered.

The red text explains that you may submit this form incomplete and return later to complete the form as necessary.

Click “Submit” when you complete this form, as that is the only way to receive an email confirmation. You may still return to edit this form later if needed.
